DETAILED ACTION

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-7, 14-18, 24 drawn to a wearable action-assist device that controls the operation of the device separating the nerve transfer signal from the myoelectric signal.

Group II, claim(s) 8-13, 19-23, 25 drawn to a wearable action-assist device that controls the operation by comparing the a physical quantity related to the action of the wearer with parameters stored in a database.

The inventions listed as Groups I-II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: The invention of Group I controls the operation of the action-assist device using different operating parameters by separating the myoelectric signal into two different components and generating driving currents from each component. The invention of Group II controls the operation of the action-assist device using different operating parameters by comparing a physical quantity related to the action of the wearer with stored parameters in a database.
